

## **Windows (all versions)**

[Eseguibile v3.6](#)

## **Linux**

[Eseguibile v0.9beta](#) (32-bit) NEW

On Linux/Unix, you need to make the file executable in order to run it. You can either do this with your desktop's file manager or, at the command line, type:

```
chmod u+x Magiant
```

You should now be able to execute the file as normal. You can do this from the command line by typing:

```
sudo ./Magiant
```

[Codice Sorgente](#)

Librerie richieste:

libqt4-core  
libqt4-dev  
libqt4-gui  
qt4-dev-tools  
qtdesigner  
qt creator  
build-essential  
libssl-dev

Für die Kompilierung ausführen Sie:

qmake

make

In Ubuntu 10.10 haben wir die folgenden Kopplungen identifiziert (in Klammern gibt es den Namen der Programm Bibliothek für die 64-bit)
