

Magiant srl operates primarily in the area of design of electronic systems, and production of prototypes and small series of electronic PCB. Availability and competence characterize the mission which consists in offering personalized services in respect of the specific needs of clients. The solid technical expertise and the continuous research for innovative technological solutions enable a high level of developed product quality. The particular attention to the customer at all stages ranging from the definition of specifications to design up to the production, are the cornerstone of a structure that makes solving the problems of users and the development of improved products its primary objective. Magiant srl develops systems using microcontrollers of the main world producers, such as Microchip, Motorola and ST, with expertise ranging across the field of electronic control of industrial machines and processes, automation, home automation and data acquisition. A staff of experts is available to offer advice and support by establishing a relationship of continuity to ensure a constant presence and technical assistance aimed at continuous improvement of the product. Magiant build systems for automatic testing of products and electronic boards, interfacing with custom control software, measurement, and verification of characteristics of the product.
